

Dean Industrial are a leading Abrasive Blast and Protective Coating Company located in the Illawarra area in NSW. With over 30 years' experience of performing protective coating works throughout NSW and interstate for many different customers, from time to time we have height access work with obstacles that exclude conventional height access methods like EWP's and Scaffolding.

In the past we have turned to "All Trades Abseiling" for their assistance in tackling these types of tasks which have included concrete plant silos, communication towers, building frame work and internal structures.

"All trades Abseiling" have proven to be an excellent company to rely on and have a proven group of highly skilled and motivated abseilers that are safely able to complete all tasks in a quick and professional manor.

"All trades Abseiling" are an excellent cost effective way to complete difficult tasks in minimal time which has benefited our customers in reducing their down time in shut downs and minimised interruptions to commercial venues. "All trades Abseiling" willingness to achieve a very high standard of workmanship is certainly not lost on our company.

We use and recommend "All Trades Abseiling" as our first point of contact for most of our height access work knowing that we will achieve an above par job, in a minimal time frame with a high **Safety Standard** for our customer's needs.

Regards,
Phil Perry
